

PM-2700

How much time have you wasted moving material around your shop, either loading/unloading, or from a machine to a container? Now you can make moving material, packing, loading, and unloading a breeze with this incredibly versatile conveyor rolling system. Bora Portmate's PM-2700 gives you unprecedented shop mobility, in a portable package that you can put almost anywhere. Really – just roll it to your desired location, open it up, set the height to what you need (even slope it downwards), and get to work! It's that simple.

- **CONVEYOR CONVENIENCE RIGHT WHERE YOU NEED IT** – The PM-2700 is a portable conveyor system that expands from 14-3/4" (375mm) to 50" (1270mm), giving you a rolling conveyor system exactly where you need it. Roll it up to a machine's outfeed side, and your material effortlessly moves to the next production station, a container or anywhere else you need.
- **HIGH QUALITY MATERIALS AND WORKMANSHIP** – The frame expands and locks rock solid, as do the casters. The 14" wide rollers are smooth in operation, allowing your material to glide with ease. And it can hold up to 300 lbs., so large jobs are not a problem.
- **COMPLETELY ADJUSTABLE** – Can be adjusted from 23" to 36" in height, and locks tight. Measuring marks on the legs ensure it's always level... unless you'd rather have a slope, of course – that's possible too. This makes it even more versatile.
- **EXPANDABLE** – Built in hooks allow you to attach two or more PM-2700's together, giving you almost limitless mobility options. So you can move material all the way across the shop!
- **COMES WITH A ONE YEAR WARRANTY** – Buy with confidence, because Bora Tool makes great products!
